PROJECTS

ORDERING SYSTEM

Designed and developed a PHP/JS Ordering System for a Pharma Company that gathers all the orders that the Pharma representatives collect from the health professionals (HP) from all of the US. Including an API service for getting all the HP data, EDI file service form automated integration of their internal managing system of the orders placed, HCP signature validation process through API and integration for future E-commerce Shop in WooCommerce.

PROJECT MANAGEMENT SYSTEM

Designed and developed a PHP PM System for a Marketing Company that gathers all the projects, tasks and files that the company uses in their client relationships and works. The system connects to Telegram for a private version of Slack-Type based workflow. It also tracks the time of the tasks assigned.

GASPIPE MAINTENANCE SYSTEM Designed a Python System for a large Gas Company that keeps track of all the maintenance operations of the company in the Samalayuca Pipeline. 100% cloud-base, from any device where they can plan, assign, execute and report all tasks directly to technicians or suppliers from one place, manage their team, reports and KPIs alerts. It also integrates a 3D parts viewer with manuals regarding the part maintained.

WEB DEVELOPMENT

Through my career I have designed and developed more than 300 Wordpress websites, more than 50 HTML5 websites, and 18 PHP systems. I have also designed but not developed other 32 systems and managed teams of 40 (in groups of 5), mainly python, developers at once.
